

Day-008-Lec(Python Function Input)

In [21]:

```
def greet():  
    print("Hello Angela")  
    print("How do you do Abbas")  
    print("Is not the nice today")  
  
greet()
```

Hello Angela
How do you do Abbas
Is not the nice today

In [26]:

```
name = input("Enter your Name ")  
def greet(name):  
    print(f"Hello {name}.")  
    print(f"How do you do {name}")  
    print("Is not the nice Weather today")  
  
greet(name)
```

Enter your Name Abbbas khan blouch
Hello Abbbas khan blouch.
How do you do Abbbas khan blouch
Is not the nice Weather today

In [11]:

```
# name =  
def greet_with_name(name):  
    print(f"Hello {name}.")  
    print(f"How do you do {name}")  
greet_with_name("Bilal")
```

Hello Bilal.
How do you do Bilal

Positional Vs Kewards Arguments

In [20]:

```
# Positional Arguments  
#position of arguments is very important  
def greet_with(name , location):  
    print(f"Hello {name}")  
    print(f"what is it like in {location}")  
greet_with( location = "Islamabad", name ="Abbas")
```

Hello Abbas
what is it like in Islamabad

In [18]:

```
def abbas( a , b, c):  
    print(f" Abbbas")  
    print(f"khan")
```

```
print(f" Aloooo")  
abbas(a= )
```
